

## FibaFuse® MAX is an innovative, reinforced paperless joint tape.

FibaFuse® MAX has the same open fibre structure as original FibaFuse® tape, with a porous design that allows compound to flow through the tape for a stronger bond. This dramatically reduces the potential for cracks and eliminates bubbles and blisters. The blue reinforcement layer features a tri-directional construction that provides crack resistance in multiple directions and prevents accidental tearing of the tape on inside corners.

FibaFuse® MAX can be applied using either automatic taping tools or by hand perfect for inside corners, patching and repairs.

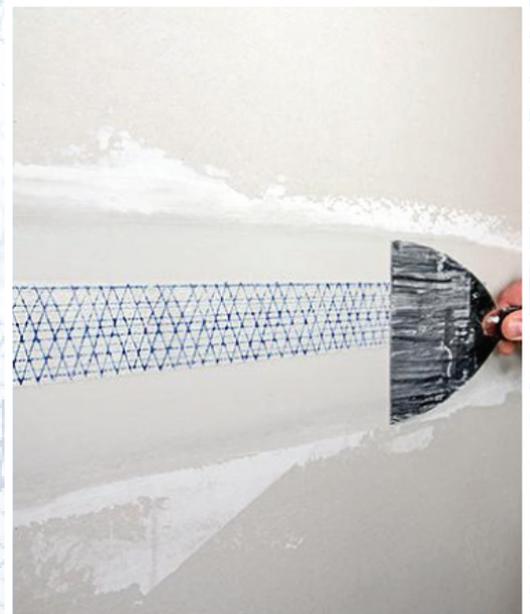

### **How is FibaFuse® MAX different from mesh tapes?**

FibaFuse® MAX is a non-adhesive, glass mat tape with an added reinforcement layer that must be embedded into joint compound. Mesh tape is a self-adhesive fabric that applies directly to the drywall surface and is then coated with joint compound.

### **Does it matter which way FibaFuse® MAX is installed?**

Yes, you must apply the blue layer to the plasterboard when installing FibaFuse® MAX.
