847au® Spray Adhesive

RE: VOC Statement and Documentation

Dear Valued Partners and Customers,

This letter is to confirm the VOC content of the Trim-Tex 847® / 847au® product line in full compliance with the CARB (California Air Resources Board) Low VOC standard. This product meets the VOC limit of California and other VOC regulated states.

The VOC characteristics of this product are as follows:

- VOC content: 271.1 g/L, excluding water (concentrate and propellant)
- VOC content: 271.1 g/L, including water (concentrate and propellant)
- Specific gravity of concentrate: 0.760 – 0.800
- VOC content of concentrate: 14.0% by weight
- VOC content of finished product: 39.8% by weight (concentrate and propellant), calculated using U.S. EPA VOC definitions

The above VOC values **exclude methyl acetate**, which comprises **35% by weight** of the product and is classified as a **VOC-exempt compound under U.S. EPA and CARB regulations**, as well as other U.S. state VOC programs. When both exempt and non-exempt VOCs are included, the **total VOC content of the product (excluding water)** is **74.8% by weight**.

Please note that **VOC definitions and exemption criteria vary by jurisdiction**. While methyl acetate is exempt from VOC calculations under U.S. regulations, its treatment under **Australian and New Zealand VOC regulations may differ**. Determination of VOC compliance for those jurisdictions should be made in accordance with the applicable local regulatory or certification requirements.

Sincerely,

A handwritten signature in black ink, appearing to read "Jason Kramer", written over a light blue horizontal line.

Jason Kramer, Product Manager
