## ***A great solution for managing movement between walls and ceilings***

Wall Mounted Deflection bead will reduce inside corner cracking when installed against a ceiling or concrete deck that may be subject to structural movement. The flexible gasket expands and compresses providing up to 10mm total deflection. Another great feature of Deflection Bead is that it can be mitred to fit both 90° inside and 90° outside corners easily using a pair of snips. The bead features a 28mm mud leg used to set the bead and a 6mm Tear Away strip that once removed, results in a clean, finished edge minimising both labour and clean up.
