72-9000 Flat Tear Away Bead

TRIM-TEX
DRYWALL PRODUCTS

Create a finished edge where plasterboard terminates at other substrates or building components such as windows and doors

Trim-Tex Flat Tear Away Bead features an 8mm tear-off leg that protects the adjoining surface from plaster and paint while acting as a guide for the taping knife. When finished, simply tear off the masking leg for a clean, sharp appearance. The 72-9000 is designed for areas where the plasterboard has been butted too close to adjoining surface to slip the return leg behind the plasterboard.
