

Cut your mitre tighter

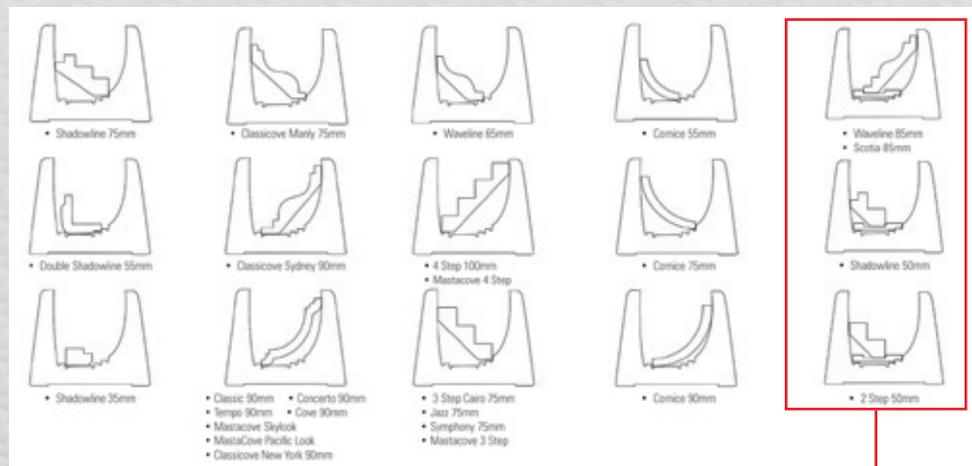

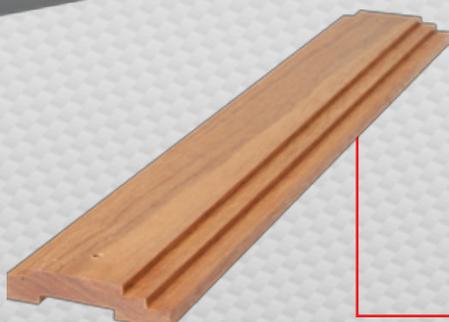

Try the WS-3210 800mm saw specially designed for cutting decorative cornice with the Adjustable Mitre Box and other larger Mitre Boxes.

The Wallboard plastic mitre box (code 14-400) lasts up to 3 times longer than traditional plywood boxes. It's made from hard wearing plastic with the 5 cornice steps moulded into the box making it weather resistant. The revolutionary design of the plastic mitre box allows butt joints to be cut from the centre to produce a tighter fit thereby reducing the need for patching after cornice installation.

- MB-90 - cuts 55mm, 75mm and 90mm cornice at 45°
- MBD-90 - cuts 55mm, 75mm and 90mm cornice at 45° and 135°
- MBD-100 - cuts 55mm, 75mm, 90mm and 100mm cornice at 45° and 135°
- MBA-300 - 300mm adjustable Mitre Box for decorative cornice

The plastic mitre box is able to accommodate twelve different profiles of cornice. **Three further cutting profiles are achieved with addition of the 14-410 timber insert.**
