

CFP SERIES CORNER FINISHER

The Tapepro CFP series corner finisher features a low friction high strength industrial plastic body. This requires fewer parts, reducing cost.

The stainless steel frames have been laser cut and machined for accuracy and feature super wear resistant cemented carbide blades and skids.

Code: CFP-75

Features:

- Lower cost design utilising an industrial plastic body.
- Two piece body with removable top piece.
- Laser cut stainless steel frames.
- Super wear resistant carbide blades and skids.
- Cleaning hole in top piece.
- Fewer parts.
- Corner Finisher performance.

USING THE TAPEPRO CORNER FINISHER

The Tapepro Corner Finisher is designed to finish both sides of an internal angle at once whilst feathering the edges of the joint compound.

The CFP-75 is typically used to apply a finish coat after taping, rolling and glazing the first coat, and used in conjunction with a corner box or compound tube.

It can also be used for glazing when fitted to a corner finisher handle.

When used it is important that pressure is applied equally to both sides of the joint - stand so that the handle bisects the angle (45° to the wall).

CLEANING

Clean your Tapepro Corner Finisher with clean water and a brush, being careful to remove all joint compound.

Pay particular attention to the area behind the frames.

The hole in the top piece provides access behind the point.

MAINTENANCE

The Tapepro Corner Finisher features long wearing blades and skids, but may require adjustment from time to time. Lubricate as necessary with a silicone spray lubricant.

All replacement parts are available from your local plasterboard distributor or Tapepro Drywall Tools.

For your nearest distributor please visit our website: www.tapepro.com or call Tapepro Drywall Tools on +61 7 5520 6022.
