## Safety Guidance Notes: Wallboard Tools Trestles

*model numbers 13-740 (900mm), 13-742 (1200mm), 13-743 (1500mm), 13-744 (1800mm)*

Wallboard Tools trestles are fabricated from light weight steel tube for ease of handling.

Our trestles have been tested in accordance with AS/NZS 1576.5:1995, Appendices A and B and comply with the requirement for light duty loading of 2.2 kN per bay as specified by AS/NZS 1576.1:2010, Clause 2.5.3.1.2 (a).

Wallboard Tools trestles are load rated to light duty meaning that a deck between any two trestles can safely support a working load of 225 kg. Materials must not be placed on the deck. Two scaffold planks must be used at all times between a pair of trestles. The planks are supported on one rung of a trestle or the top pair of rungs. Planks must be scaffold planks complying with AS 1577.

Inspect trestles before each use - do not use trestles that show any signs of damage.

Ensure the trestles are resting on all four legs uniformly on the floor and that the side braces are fully extended by pressing down firmly on each.

Safety Certificates are available for download from the Wallboard Tools website.

Scan this code to  
view or download  
safety certificates.
